

VISHNUTEJA B

AI Engineer

Bengaluru, Karnataka • bvishnuteja.2004@gmail.com • +91-8139991104 • [linkedin.com/in/vishnutejab](https://www.linkedin.com/in/vishnutejab) • vishnuteja-portfolio.vercel.app

SUMMARY

AI/ML Engineer with around 1 years of experience in generative AI and data analytics. Delivered an enterprise AI chatbot built on Groq API and FastAPI that lowered repetitive IT support tickets and enabled semantic search across company documents. Created and launched over five Power BI dashboards that improved KPI visibility for management. Skilled in Python and PyTorch, works independently while collaborating across teams to scale AI driven workflow automation.

SKILLS

Programming & Core Tools: Python, SQL, Git, Jupyter Notebook, VS Code, Linux

Machine Learning & Deep Learning: Scikit learn, TensorFlow, PyTorch, CNN, LSTM, PCA, Feature Engineering, Data Preprocessing, Random Forest, Logistic Regression, Linear Regression, Transformers, Hugging Face ecosystem

Generative AI & NLP: LangChain, OpenAI API, Groq API, Prompt Engineering, RAG, GPT 4, Llama 3.3 70B

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Power BI

Backend & API Development: FastAPI

EXPERIENCE

Project Analyst

Dec 2025 – Present

Evolute Fintech Pvt. Ltd.

Bengaluru

- Architected and shipped EvoBot, an internal AI powered IT support chatbot built with Python, FastAPI on Linux containers, and Hugging Face Transformers (Llama 3.3 70B) via Groq API; owned end to end development, cutting repeat support tickets by 30% and boosting first contact resolution.
- Designed and delivered a company wide document intelligence assistant using Python, LangChain, and Hugging Face Retrieval Augmented Generation pipelines on Linux servers; collaborated with product and security teams to enable semantic search across 200k documents, reducing information lookup time by 40%.
- Implemented real time monitoring dashboards for AI services using Python, Prometheus, and Grafana on Linux, providing visibility into latency, error rates, and token usage for 1,000 daily queries.
- Engineered prompt engineering and context injection pipelines in Python leveraging Hugging Face Transformers, reducing hallucination rates by 25% while independently iterating and coordinating with data science peers to refine response relevance.

Data Analyst

Apr 2025 – Sep 2025

Skyllyx

Bengaluru

- Developed Python data analysis scripts running on Linux VMs to process 10M rows of transactional data with Pandas and NumPy, delivering weekly trend reports that informed senior leadership decisions.
- Automated end to end data cleaning and feature engineering pipelines in Python on Linux, cutting manual preprocessing time by 45% and enabling downstream modeling.
- Authored high performance SQL extraction routines and partnered with business analysts to integrate results into Python driven reporting, supporting cross functional decision making for 5+ product lines.
- Built and deployed a demand forecasting model with PyTorch Lightning on Linux, achieving 12% RMSE improvement over baseline and delivering predictions via a FastAPI endpoint consumed by internal dashboards.

PROJECTS

AutoML Desktop Application

- Developed a full stack AutoML platform that automated preprocessing, EDA, feature engineering, and ML model training, reducing manual workflow time by approximately 60%.
- Implemented automated classification and regression pipelines using Random Forest, Logistic Regression, and Linear Regression, achieving up to 92% classification accuracy on structured datasets.
- Integrated an LLM powered dataset assistant using LangChain with GPT 4/Groq APIs, enabling users to query datasets in natural language with contextual schema aware prompting.
- Built visualization modules for feature importance analysis, missing value detection, correlation analysis, and prediction graph generation for datasets containing 10K+ rows.
- Structured reusable ML workflows and modular backend components to support scalable experimentation and future model integration.

CNN Image Detection with PCA

- Designed and trained a multi class CNN based image classification system using TensorFlow/Keras, achieving approximately 91% validation accuracy on augmented image datasets.
- Applied Principal Component Analysis (PCA) to reduce high dimensional image representations by over 90% while retaining critical variance, improving training efficiency and reducing memory usage.
- Built an end to end deep learning pipeline including image preprocessing, augmentation, normalization, training, evaluation, and hyperparameter tuning.

- Improved model generalization using dropout regularization and evaluated performance using confusion matrix, precision, recall, and F1 score metrics.

EDUCATION

Presidency University
B.Tech in Computer Science & Engineering (Data Science)

Bengaluru, Karnataka
Sep 2021 – May 2025

CERTIFICATIONS

- Data Analysis with Python
- Machine Learning
- Real Time Deep Learning
- Python Programming
- MySQL
