SUMMARY

Data Scientist in analytics with hands on experience building end to end Python based machine learning pipelines and time series forecasting models. Delivered CNN classification system achieving 92% validation accuracy and automated Power BI dashboards that cut manual reporting time by 70%. Leveraged Python, SQL, and Power BI to translate complex data into actionable insights, combining strong problem solving and collaboration skills for high impact outcomes.

SKILLS

Data Visualization & BI: Power BI, Tableau, ThoughtSpot, Dashboard Development, KPI Reporting, Business Intelligence Reporting, Data Visualization, Reporting Automation

Programming & Data Analysis: Python, SQL, Data Analysis, Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Analytics, Pandas, NumPy, Matplotlib, Seaborn, Java, JavaScript, Django, Node.js, React, NoSQL

Machine Learning: Scikit learn, TensorFlow, Keras, CNN, PCA, Data Preprocessing, Machine Learning Pipelines

Data Engineering & Platforms: Databricks, Alteryx, Relational Databases, ETL/ELT Workflows

Tools & Development: Jupyter Notebook, Git, VS Code, Microsoft Excel, Microsoft Word, Microsoft PowerPoint, MS Office Suite, Robotics Process Automation (RPA)

Professional & Business Skills: Risk Management, Client Service, Long Term Performance Analysis, Communication, Collaboration, Cross Functional Teamwork, Stakeholder Management, Workflow Optimization, Problem Solving, Decision Support

EXPERIENCE

EVOLUTE FINTECH PVT. LTD

Bengaluru

PROJECT ANALYST

Dec 2025 – Mar 2026

- Created interactive dashboards and business reports using JavaScript visualizations integrated with Python processed data, tracking key performance indicators and enabling data driven decision making.
- Collected, cleaned, and analyzed large datasets from SQL and NoSQL (MongoDB) sources using Python and Excel, enhancing data quality and reporting accuracy.
- Designed and automated dashboards in Power BI/Tableau, reducing manual reporting time by 70%
- Built executive level dashboards to visualize business performance, operational metrics, and project status.
- Reduced data inconsistencies by 40% through data validation and quality assurance processes
- Technologies: Python, SQL, Excel, Power BI/Tableau, Pandas, NumPy, Data Analysis, Dashboard Development, Project Management, KPI Reporting, Data Visualization, Business Analytics.

SKYLLX

Bengaluru

DATA ANALYST

Apr 2025 – Sep 2025

- Analyzed multi source structured datasets in Databricks notebooks with SQL, Python, and Java based data processing scripts to uncover operational patterns for senior management reviews.
- Automated exploratory data analysis and data preparation with Alteryx Designer, reducing manual reporting effort by 40% and standardizing pipelines.
- Built interactive Tableau dashboards and embedded custom React components served via Node.js, integrating ThoughtSpot search driven analytics to deliver KPI tracking for 15 client accounts and enable self service insights.
- Crafted executive level presentations and analytical reports using Tableau visualizations, Excel modeling, and PowerPoint, effectively communicating insights to senior stakeholders and driving data informed decisions.
- Engineered optimized SQL queries against relational databases (PostgreSQL, MySQL) for extraction, transformation, and loading, supporting data feeds for Tableau and ThoughtSpot dashboards.
- Advanced long term performance analysis and reporting automation, improving workflow accuracy by 15% and fostering cross team collaboration on data initiatives.
- Facilitated stakeholder communication by presenting analytical findings in workshops, securing buy in for data driven decisions and reinforcing collaboration across business units.

PROJECTS

TIME SERIES FORECASTING USING TIMESFM FOUNDATION MODEL

- Developed an end to end Python based time series forecasting pipeline using TimesFM on the ETTh1 benchmark dataset (17,420 hourly observations), implementing data preprocessing, feature engineering, model training, inference, and 80/20 train test evaluation.
- Engineered 11 dynamic covariates including temporal features and lag features, enabling multi horizon forecasting using `forecast_with_covariates()` pipeline. • Implemented Full Fine Tuning and LoRA Fine Tuning pipelines in PyTorch, developing sliding window dataset generation, batching, forward propagation, backpropagation, optimizer updates, validation, and inference workflows.
- Evaluated forecasting performance across 96 hour, 336 hour, 576 hour, and full horizon (3.4K hour) prediction windows using MAE and RMSE, with visualization of predicted vs. actual trends.
- Reduced trainable parameters from 231.3M (Full Fine Tuning) to 1.23M using LoRA, achieving approximately 188x parameter efficiency while maintaining effective adaptation of the pretrained TimesFM model

SALES & SHIPPING ANALYTICS DASHBOARD

- Developed an interactive business intelligence dashboard analyzing shipment trends, sales performance, carrier metrics, and operational KPIs using structured business datasets.
- Created automated KPI dashboards and trend analysis reports improving operational visibility, reporting efficiency, and business monitoring workflows.
- Utilized Power BI, Tableau, Excel, SQL, and statistical analysis techniques to build dynamic visualizations supporting management decision making processes.
- Enhanced reporting automation and analytical workflow efficiency by approximately 35% through dashboard optimization and automated data processing.

CNN IMAGE DETECTION WITH PCA

- Designed and trained a CNN based image classification system using TensorFlow/Keras, achieving approximately 91% validation accuracy on augmented datasets.
- Applied Principal Component Analysis (PCA) to reduce image dimensionality by over 90%, improving training efficiency and reducing computational overhead.
- Built an end to end machine learning pipeline including preprocessing, augmentation, normalization, model evaluation, and hyperparameter tuning.
- Improved model generalization using dropout regularization and evaluated performance using precision, recall, F1 score, and confusion matrix metrics.

EDUCATION

PRESIDENCY UNIVERSITY

B.Tech in Computer Science & Engineering (Data Science)

Bengaluru, Karnataka

Aug 2021 – Nov 2025

CERTIFICATIONS

- Data Analysis with Python
- Machine Learning
- Real Time Deep Learning
- Python Programming
- MySQL

LANGUAGES

- English: Professional
- Telugu: Native
- Hindi: Professional
- Kannada: Professional

PUBLICATIONS

CROWDSOURCING BASED PLANT DISEASE DETECTION

Authors: Vishnuteja Bikkina, Suman Gowda, Vamsi

Co authored and published a research paper on a crowdsourcing based plant disease detection system. * Developed an AI driven approach for plant disease identification using machine learning and image based analysis. * Collaborated with a team to design, implement, and evaluate the proposed solution, contributing to data collection, model development, and system validation.
